## *Acknowledgements*

This book is not possible without the help of the many dedicated paperfolders, whom I am proud to have as friends.

David Petty, my regular correspondent in England and also an active member of the British Origami Society, has played a major role in this book, although only three of his models are included in this book, Petty has contributed by boosting my creative abilities, especially in times when I needed it most. Both he and his wife, Lilian, have supplied countless subjects relating to hearts. Models like "Baby Love", "Sweet Heart", "Love is Blind" and many others are the results of their brainstorming.

Paul Ee, my comrade, provided six of his excellent creations which I am proud to include in this book.

To the rest who have contributed, namely, Nick Robinson and Edwin Corrie of the British Origami Society, Francois Ziegler of France, Edwin Young of the U.S.A., Kunihiro Kasahara and Jun Maekawa of Japan, I offer my heartfelt thanks for all their excellent models.

My thanks to Eunice Lew of the U.S.A. for proofreading and for supplying diagrams of heart models by various paperfolders. My apologies for not including any, as some are similar, some too complicated and a few which I would like to include in this book but could not obtain permission from the creators.

I wish also to thank the Momotani family, Dokuotei Nakano of Japan and Vicent Palacios of Spain for their generous assistance.

I would especially like to extend my gratitude to Tomoko Fuse for introducing my works, not only to Japan but also to her publisher, Japan Publications Trading Co., Ltd., Tokyo, Japan.

My thanks to Yunosuke Murakami of Japan Publications Trading Co., Ltd. for his interest in my works and for publishing this book.

This book is dedicated to all my friends and all those mentioned here.

# *Introduction*

This book is dedicated to matters of the heart and presented here are some ways in which this can be expressed through ORIGAMI, the Japanese Art of paper folding. I hope you may gain something from these pages, that the models presented here may be useful for you to convey your feelings to the one(s) you love and perhaps inspire you to create your own models.

You can start folding from any part of this book as the models are not arranged in order of progressive complexity. However, certain models with the same starting bases are grouped together. In such cases, when you have difficulties in folding, simply refer to the models which appeared earlier.

Included in this book are also some modular folds. For these, you need to make the number of units required and then assemble them together. Cutting and the use of glue is not necessary and the only requirement is precision. Pay careful attention to the creases and location points and always look one step ahead. The diagram of each step is the result of folding of the previous.

Any type of paper can be used to fold most of the models presented here but for certain models, paper-backed foil is necessary. You can also use any color but red colored paper is most suitable for heart models. For models which show both sides of paper, "Duo-colored" paper is preferred. I use standard Origami paper (150mm  $\times$  150mm or 6"  $\times$  6") for models which begin with squares. For models folded from rectangles, the proportions are cut from the standard square.

Use larger papers for practicing and when you are familiar with the folding procedures, fold it from a smaller paper. A smaller model not only looks more attractive than a larger one, it can also be easily contained in an envelope together with your love letters, cards or gifts. This will provide the recipient with a little something which is not easily available. Something meaningful, something origami coming straight from the heart.

As intended, most of the models here carry a hidden message, usually a message of love. Some models are meant for just one purpose, some more than one. Some even for the purpose of insulting. For whatever purpose these are being used for, I hope you enjoy folding the models in this book. When you have folded all the models here, you will discover that like love, Origami is a many splendored thing.
